# PRINCE EDWARD ISLAND POPULATION REPORT 2020

# OVERVIEW

DIAGRAM 1: PRINCE EDWARD ISLAND POPULATION, AS OF JULY 1, 2001 - 2020

On September 29, 2020 Statistics Canada published its preliminary provincial population estimates for July 1, 2020, as well as revisions to the 2017 to 2019 population estimates. As of July 1, 2020, Prince Edward Island's population is estimated to be 159,625. This represents a yearly increase of 2,363 persons or a 1.5 per cent annual growth rate. This was the highest growth rate among provinces for 2020, the fifth consecutive year leading the provinces in population growth. Alberta and Ontario had the next highest growth rates at 1.4 per cent and 1.3 per cent respectively, while Nunavut had the highest growth of all jurisdictions at 1.9 per cent. The growth rate for Canada was 1.1 per cent in 2020. PEI's three year growth rate (2017 to 2020) at 6.1 per cent leads all provinces and territories.

International immigration continues to be the driver of population growth on Prince Edward Island. Natural increase (births minus deaths) has been declining steadily since the early 1990's and in recent years has crossed into the negative. Inter-provincial migration has been a source of population growth in recent years, however historically periods of inter-provincial growth have been followed by periods of net loss, usually dependent on the economic situation both on Prince Edward Island and in western provinces. Population growth on PEI will be dependent on international immigration for the foreseeable future.

Statistics Canada also released revisions to the 2017, 2018, and 2019 population estimates. PEI's July 1, 2017 population estimate has been revised down slightly, from 150,483 to 150,402. The July 1, 2018 population estimate was revised down from 153,584 to 153,396. The July 1, 2019 population estimate was revised up from 156,947 to 157,262. The revised estimates and growth rates for Canada and Prince Edward Island can be seen in Table 1.

TABLE 1: NATIONAL AND PROVINCIAL POPULATION & GROWTH RATES, JULY 1

Newfoundland and Labrador was the only jurisdiction to see population decline in 2020. Population estimates for July 1, 2019 and 2020 for all provinces and territories are shown in Table 2 below.

|          | 2019       | 2020       | Growth |
|----------|------------|------------|--------|
| CAN      | 37,593,384 | 38,005,238 | 1.1%   |

# TABLE 2: POPULATION OF PROVINCES & TERRITORIES,JULY 1, 2019, 2020 & ANNUAL GROWTH RATES

# **COMPONENTS OF GROWTH**

### DIAGRAM 2: PRINCE EDWARD ISLAND COMPONENTS OF GROWTH JULY 1, 2019 – JUNE 30, 2020

# Natural Increase

There were 1,353 births and 1,367 deaths on Prince Edward Island from July 1, 2019 to June 30, 2020, for natural increase of minus 14. According to the revised data, this is the third consecutive year that deaths have outnumbered births on Prince Edward Island. Compared to the other Atlantic Provinces, this first occurred in 2006-07 in Newfoundland and Labrador, in 2012-13 in Nova Scotia and in 2014-15 in New Brunswick. All other jurisdictions continue to have positive natural increase.

The revised data now show that from July 1, 2017 to June 30, 2018, there were an estimated 1,295 births and 1,368 deaths, for natural increase of -73. From July 1, 2018 to June 30, 2019, there were an estimated 1,308 births and 1,389 deaths, for natural increase of -81.

\*Other International =Net Non-Permanent Residents - International Emigrants + Returning Canadians - Canadians Temporarily Abroad

## International Migration

From July 2019 to June 2020, a total of 2,082 international immigrants came to the province, a decrease of 8.2 per cent as compared the previous year. This follows a 7.8 per cent increase in immigrants in 2018/19. The decline was due to a drop during the second quarter of 2020 (April to June), which was at the height of the Covid-19 shutdown. International immigration during the second quarter was 286, compared to 601 over the same period in 2019. At a rate of 13.1 per thousand<sup>1</sup>, the province had the highest immigration rate in the country, ahead of Saskatchewan at 11.4 per thousand. The immigration rate for Canada was 7.6 per thousand.

Net international migration was estimated to be 2,839 persons. This consisted of the 2,082 international immigrants, 781 net non-permanent residents, and 44 returning Canadians entering the province, while 40 international emigrants and 28 temporarily abroad Canadians left the province.

### Inter-Provincial Migration

Between July 1, 2019 and June 30, 2020, Prince Edward Island had an estimated net inter-provincial out migration of 462 people (3,296 in-migrants less 3,758 out-migrants). This follows four consecutive years of positive net inter-provincial migration from 2015-16 to 2018-19.

As shown in Table 4, the primary source of PEI's inter-provincial in-migrants during this period was from Ontario, followed by Nova Scotia, Alberta, New Brunswick, and British Columbia. The main destinations of out-migrants from Prince Edward Island were to Ontario, Nova Scotia, British Columbia, New Brunswick, and Alberta. British Columbia saw the largest gain from inter-provincial migration, as 24.4 per cent of all interprovincial migrants from other provinces were destined for BC. In terms of gross flows, PEI had the most mobile population among provinces but well below the percentage of people moving to and from the Territories. Diagram 3 shows gross flows of interprovincial migrants as a percentage of total population for the provinces and territories for 2019/20.

<sup>&</sup>lt;sup>1</sup> Immigration rates are calculated by the PEI Statistics Bureau based on Statistics Canada population estimates.

# TABLE 4: ORIGIN & DESTINATION OF INTER-PROVINCIAL MIGRANTS,JULY 1, 2019 TO JUNE 30, 2020

#### DIAGRAM 3: GROSS FLOW OF INTERPROVINCIAL MIGRANTS AS PERCENTAGE OF TOTAL POPULATION, PROVINCES AND TERRITORIES, JULY 1, 2019 – JUNE 30, 2020

# POPULATION BY AGE AND GENDER

On July 1, 2020, Prince Edward Island's population consisted of 81,117 females (50.8 per cent) and 78,508 males (49.2 per cent). The median age<sup>2</sup> on Prince Edward Island on July 1, 2020 was 42.9, a decline of 0.2 from 2019 and the fourth consecutive year the median age has declined. The last time this occurred was when median age declined for five consecutive years from 1963 to 1967. Median age has been declining recently as a result of the larger number of international immigrants under 40 entering the province.

By comparison, the median age in 2010 was 42.0 and 37.1 in 2000. Since a low of 23.9 in 1967, the median age has risen by 19.0 years (see diagram 4).

# **School Aged Population**

The number of children aged 5 to 18 on Prince Edward Island was estimated to be 24,462 on July 1, 2020, an increase of 1.0 per cent over 2019. From 2010 to 2020, the total school aged population has risen by 3.4 percent or 802 people. However, it is important to note that this age cohort was in decline from 1997 to 2015. Since reaching a low of 22,629 in 2015, there has been an increase of 1,833 children, or growth of 8.1 per cent. Over this five year period, the elementary school age group has increased by 9.5 per cent, the intermediate school age group by 10.8 per cent and the high school age group by 2.3 per cent. Diagram 5 shows the school aged population for Prince Edward Island from 2010 to 2020.

<sup>&</sup>lt;sup>2</sup> The median age is the age at which exactly half the population is older and half the population is younger.

# **Working Age Population**

The number of people aged 15 to 64 on Prince Edward Island was estimated to be 103,225 on July 1, 2020, an increase of 1.3 per cent over 2019. From 2010 to 2020, the working age population has risen by 7.1 percent or by 6,831 people. This age cohort was in decline from 2012 to 2015. Since 2015, there has been an increase of 8.6 per cent, or 8,204 people, over just a five year period. The majority of the growth over this period occurred in the 25 to 44 age group, which increased by 4,658 people, or 13.8 per cent. Diagram 6 shows the working aged population for Prince Edward Island from 2010 to 2020.

DIAGRAM 6: PRINCE EDWARD ISLAND POPULATION AGED 15 - 64, 2010 - 2020

## **Senior Population**

The age cohort with the largest percentage increase over the past ten years has been for those aged 65 and over. The number of people aged 65 and over on Prince Edward Island was estimated to be 31,957 on July 1, 2020, an increase of 3.3 per cent over 2019. This age group has been increasing steadily since the mid 90's, with accelerated growth of 2.0 per cent or more per year since 2006. From 2010 to 2020, the senior population has risen by 44.8 percent or by 9,894 people. The largest increase has been in the 65 to 74 age group, as the baby boomers move into retirement age. This age group has increased by 58.7 per cent since 2010, or by 7,110 people. The 75 to 84 age group increased by 30.8 per cent (2,176 people) over this period, while the 85 and over age group increased by 21.0 per cent (608 people). Diagram 7 shows the senior population for Prince Edward Island from 2010 to 2020.

#### DIAGRAM 7: PRINCE EDWARD ISLAND POPULATION AGED 65 AND OVER, 2010 - 2020

Table 5 shows the age and gender breakdown of PEI's July 1, 2020 population, as well as the rate of change from 5 and 10 years ago.

# TABLE 5: PRINCE EDWARD ISLAND POPULATION BY AGE AND GENDER,JULY 1, 2020 & 5 AND 10 YEAR RATES OF CHANGE

### **Dependency Ratios**

The total dependency ratio continues to increase, due solely to an increasing senior dependency ratio. The total dependency ratio is the ratio of persons under age 15 plus those aged 65 and older to the working age population 15 - 64. It is expressed as the number of youth and seniors per 100 persons aged 15 to 64. The youth dependency ratio is the ratio of the youth population to the working age population, while the senior dependency ratio is the ratio of the senior population to the working age population.

The total dependency ratio for PEI declined steadily from the early '70s until 2007, where it was lowest at 46.8 per 100 working aged people. This was due to a declining youth dependency ratio as the number of 0 - 14 year olds declined and the working age population increased. The senior ratio remained relatively unchanged over this period, rising by only 2.7 from 1971 to 2007. However, from 2007 to 2020, the senior dependency ratio has risen by 9.1, of which 6.4 has been since 2012. This increase in the senior ratio can be seen in diagram 8.

r: revised data p: preliminary data

For more information about Canada's population, now available is Statistics Canada's new <u>Population and</u> <u>Demography Statistics Portal</u>. As part of the agency's commitment to making information more accessible and increasing Canadians' statistical literacy, the new portal provides a single access point for users to find, use and analyze population and demography related information.

#### Note to Readers:

These estimates are based on 2016 Census counts adjusted for census net undercoverage and incompletely enumerated Indian reserves, to which are added the population growth estimates for the period from May 10, 2016, to the date of the estimate.

This analysis is based on preliminary data. These data will be revised over the coming year, and it is possible that some trends described in this study will change as a result of these revisions. Therefore, this analysis should be interpreted with caution.

# Addendum – January 26, 2021

# POPULATION BY COUNTY

On January 14, 2021 Statistics Canada published its preliminary provincial population estimates for subprovincial areas for July 1, 2020, as well as revisions to the 2017 to 2019 population estimates.

Kings County's population was estimated to be 18,734 as of July 1, 2020, up from 18,291 in 2019, an increase of 2.4 per cent, or 443 persons. Kings County had gains in international migration (+365) and inter-provincial migration (+33), and intra-provincial migration<sup>3</sup> (+46), while losses occurred from natural growth<sup>4</sup> (-1). The population aged 0 - 14 in Kings County increased by 2.5 per cent, the 15 – 64 age group increased 2.0 per cent, while the 65+ age cohort increased by 3.4 per cent.

Queens County's population was estimated to be 94,110 as of July 1, 2020, up from 92,591 in 2019, an increase of 1.6%, or 1,519 persons. Queens County had gains in international migration (+2,089), intraprovincial migration (+41) and natural growth (+47), while losses occurred from inter-provincial migration (-658). There was virtually no change in the population aged 0 - 14 in Queens County, while the 15 - 64 age group increased by 1.5 per cent, and the 65+ age cohort increased by 3.6 per cent.

Prince County's population was estimated to be 46,781 as of July 1, 2020, up from 46,380 in 2019, an increase of 0.9 per cent, or 401 persons. Prince County had gains in international migration (+385) and inter-provincial migration (+163), while losses occurred from intra-provincial migration (-87) and natural growth (-60). The population aged 0 - 14 in Prince County decreased by 0.6 per cent, the 15 - 64 age group increased by 0.6 per cent, while the 65+ age cohort increased by 2.7 per cent.
